

## ➤ Project:

# Restaurant Management System

## Group Members:

## Working:

- ❖ Usama Yazdani....20p-0598 → Admin
- ❖ Subhan Khalid .....20p-0086 → Online Ordering + Bill Calculation
- ❖ Muzamil .....20p-0108 → customer Ordering+ Bill Calculation

### ➤ Usama Yazdani.....p20-0598

In our project, I have done how admin work. First I have created a login page in which admin his/her enter username then I divided this in four part in which first admin tells about how many staff members we have adding or subtracting in staff then second process how many equipment we have which we also do editing etc then we have our restaurant address then admin take feedback to the user.

### ➤ Subhan Khalid.....p20-0086

- I have done one complete part of restaurant management system that is “**Online Ordering**”. I have

tried my best to use each and every possibility as well as followed our daily life concepts in restaurant management system including Bill Calculation.

- I have used **Classes** Concepts, **Inheritance**, **File handling**, randomly used of **Conditions**.

➤ **Muzamil.....p20-0108**

- I have done “**Customer Ordering**”. In this ordering system first of all it will ask user name after that id after that it will get order from customer after that It will show the bill on screen and in this customer ordering part max of oop concepts are used .
